WEIGHING PRECIPITATION SENSOR

Weighing rain gauge with automatic drain

Like all rain[e]-series rain gauges, the rain[e]314 uses a sensitive measuring principle and fulfills all requirements of WMO Guideline No. 8. Real-time measured values for quantity and intensity of all liquid precipitation in the range of 0...720 mm/h will be output accurately and reliably. The rain[e]314 has a compact, robust design, with state-of-the-art weighing technology inside. Fully automatic continuous emptying prevents overflow and incorrect measurements and enables maintenance-free long-term use even under extreme weather conditions.

- Real-time output of precipitation intensity, amount and total amount parameters
- Measurement of each drop with the amazing resolution of 0.001 mm/m²
- Compact design with enlarged 314 cm² collecting area
- Best connectivity by diverse interfaces for simple system integration
- Version with highly efficient heating for low power consumption
- Easy calibration using a reference weight

APPLICATIONS

- Precipitation measurement networks
- Flood warning systems
- Measuring networks of water management
- Classical meteorology and hydrology
- Traffic meteorology
